(54) Title: POWER TRANSMISSION DEVICE, METHOD FOR MANUFACTURING THE SAME AND COMPRESSOR

(57) Abstract: A power transmission device (11) has a pulley (13), a hub (15), a first pin (14), a second pin (17) and a coupling member (18). The coupling member (18) is of a forked leaf spring which is substantially U-shaped and has a pair of sidepiece portions, a pair of bent portions, a pair of joining portions and a curved portion. The sidepiece portions are disposed parallel to each other. The bent portions are configured to extend from the sidepiece portions and have sandwich portions releasably supporting the first pin (14) mounted on the pulley (13), respectively. Each sandwich portion has an inside surface which is opposed to the outside circumferential surface of the first pin (14) at a regular distance, and a first and second projections which are provided at both ends of the inside surface and contacted with the outside circumferential surface of the first pin (14).
